

STEM in the Classroom

The Royal Society of Chemistry is a charity and we have lots of free resources for your science class. This workshop offers a wide range of science investigations for all pupils and all ages. The materials for the investigations can be bought in the shop and online at a very low cost.

The resources that we have created can be used for planning stand-alone lessons or as part of a thematic approach to teaching. Come along and let us know what you need for your class and leave with some great resources.
